

PRODUCTS

- Slickgone NS

Dasic Slickgone NS is one of the best selling Type 3 concentrate dispersants on the world market and has frequently been shown to be the most effective dispersant available for a wide range of different oils including those with a high wax content. Slickgone NS is extremely low in toxicity to marine organisms and is approved by many international approval organisations.

- Slickgone EW

Dasic Slickgone EW is the latest member of the product range. Slickgone EW combines high efficiency and low toxicity with an exceptional ability to breakdown chocolate mousses (water in oil emulsions). Slickgone EW will continue to disperse efficiently those oils which have become too weathered to be amenable to conventional dispersants, therefore extending the window of opportunity for dispersant use. Unlike most dispersants, Slickgone EW is also effective on refined oils and bunker fuels making it a truly versatile dispersant for the 21st century.

- Slickgone LTSW

Dasic Slickgone LTSW is a water based, hydrocarbon free, concentrate dispersant. It is highly effective at emulsifying crude oils, fuel oils and water in oil emulsions. It has extremely low toxicity and is internationally approved. **NOTE: DASIC HAS NOT MAINTAINED UK APPROVAL FOR SLICKGONE LTSW AND THIS PRODUCT CAN NO LONGER BE SOLD FOR USE IN UK WATERS.**

- Slickgone FreshWater

Dasic Slickgone Freshwater dispersant is one of the few products available world wide which can disperse oil efficiently into low and zero salinity waters. Dasic Slickgone Freshwater dispersant is the dispersant of choice in those countries which permit the use of dispersant in these environments.
